

Rescue and Retrieval:

Being protected against falls from height is a good thing, but having a rescue method that is simple, fast and practical is even better!

Rollgliss R250 Rescue Kit:

- Universal solution for rescue of a worker remaining suspended after a fall.
- Simple, don't have to be a rescue specialist to use it.
- Fast, on average a rescue takes 6 minutes.
- Practical, everything is contained in a back pack with a total weight of 8 KG.
- Flexible, comes in lengths of 10, 20 and 30m.

Ultra-Lok RSQ - The world's first self retracting lifeline with rescue:

- Exclusive design provides fall arrest, assisted rescue and self rescue.
- Fall arrest stops falls within a few decimetres and limits forces to 6kN or less.
- Rescue can be implemented at the mode selector or with first man up pole.
- Self rescue automatically lowers user to the next level after the fall.
- Lightweight and long lasting.
- 15m cable extends and retracts automatically.

Anchorage:

Crane Rail Installations has a selection of anchorage systems for all types of applications and industries.

Markets

- Steel Works/Steel Stockholders
- High Bay Warehouses
- Container Terminals/Ports & Harbours
- Construction Industry
- Motor Industry
- Paper Mills
- Manufacturing

CRI Safety Systems and PPE

Crane Rail Installations (UK) Ltd has been installing fall protection equipment for the last 10 years, predominantly in the steel work industry installing many horizontal safety systems. However since we became involved with Capital Safety the worlds leading manufacturer for fall protection equipment, Crane Rail Installations portfolio of products and services that we can offer has greatly expanded.

Horizontal Lifelines:

For work on roofs or overhead cranes, operations in aircraft hanger, bridge maintenance or loading docks, all activities calling for many professionals to work at a height. To maintain the greatest possible manoeuvring freedom, it is essential for them to have access to a lifeline attached to the structure.

Main Characteristics of the Evolution System:

- Easy and precise installation
- Each system designed on a computer program
- Total adaptability to all applications
- High Performance level
- Aesthetically pleasing

Crane Rail Installations can also provide a number of temporary horizontal lifelines.

Vertical Lifelines:

Vertical Lifelines can come in either permanent solutions designed to secure access to the work station or in temporary solutions.

- Come in either steel cable or rope options
- Quick and easy to install
- Removable fall arrest devices
- Come in Kit form for easy storage

Confined Space:

Confined spaces such as sewers, tanks or silos, are one of the most challenging of rescue situations. Proper equipment and training to perform safe rescues is essential in any operation where confined spaces must be entered.

Confined space equipment supplied by CRI:

- Davit Arms
- Winches
- Counterweight Systems
- Hoists

For a full list of Crane Rail Installations confined space equipment please contact us.
