

ENVIRONMENTAL POLICY.

Crane Rail Installations (UK) Ltd., recognises that it has a responsibility to legally comply with environmental regulatory requirements. We are very much aware of the importance of the environment in which we live. With this in mind every effort is taken to ensure that we are continually reducing our environmental impact, we will ensure harmful elements do not escape into the atmosphere, whilst carrying out normal business activities and operating methods.

Site Supervisors at each location will be responsible for ensuring that all plant and equipment used in the process of carrying out Company activities comply with the safety and quality standards for air, water and waste disposal. Exhaust emissions will be within the law permitted.

Crane Rail Installations (UK) Ltd., will ensure that noise levels produced by mobile plant used in connection with Company activities, will also be as low as is reasonably practicable and in compliance with current legislation.

Whenever possible **Crane Rail Installations (UK) Ltd.**, will endeavor to have any waste materials from contracts recycled.

All hazardous waste disposed of by Chemtech Waste Management Ltd – Certificate Number 12720.

Chemtech Waste Management Ltd provide a waste disposal service for industrial chemicals including the analysis, packaging and transport of waste (including hazardous waste) for recovery disposal. Chemtech Waste Management Ltd has been assessed and registered by NQA against provisions of **BS OHSAS 18001:2007**.

CRI License to carry Hazardous Waste Registration No. CBDU202389.

Management/Site supervisors will liaise with the Client with regard to site environmental procedures. Management/Site supervisors will be responsible for assessing the risks to the environment in relation to water and atmosphere emissions and noise levels on each individual site.

The Client will be responsible for ensuring that the site area has adequate ventilation for welding procedures.

Site Supervisors will be responsible for maintaining records of any incidents detrimental to the environment.

Continual assessment will be made to the effectiveness of our policy in maintaining the standard under regulation 28 of the waste (England and Wales) Regulations 2011.

Tidiness is one of the foundation stones of safety and good environmental practice. Many accidents are caused through people tripping, slipping and falling over materials and equipment.

A great deal of environmental problems can be eliminated if materials are disposed and stored properly.

One of the key areas of safety control is good housekeeping, all personnel can make a significant contribution to personal safety and the environment.

- Debris to be swept to the appropriate areas, away from working activities.
- Ensure waste is disposed of in the correct skip e.g. general waste, IBC containers.
- Ensure access and egress are not obstructed.
- Ensure that spilled oil, grease and liquids are cleaned up with sand etc – spill kits to be used on machinery.
- Position cables and hoses away from working activities.
- Gas cylinders to be stored in cages.
- Food to be consumed in canteens.

Correct waste disposal is an integral part of good housekeeping and maintaining high standards of a clean environment – this improves safety and reduces the likelihood of pollution occurring.
